Easy Clean Coating

Elval Colour arypon® is a permanent treatment of coated aluminium products that can be used to provide "Easy to Clean" surfaces based on nano-technology. These fluoropolymers react with the surfaces to create a low surface energy coating that is not easily wetted out with liquids. The treatment is stable and cannot be removed except by harsh abrasive cleaners or reagents with a very strong base.

Features

arypon® is a transparent coating that can be applied for most coated aluminium products. It deters dust and pollution particles from bonding on the surface, reduces the surface energy, and creates a hydrophilic surface that assists the washing away of dirt particles naturally with rain water or soft wiping.

Advantages/Benefits

- High weathering resistance
- Soils and liquids tend to "slide off" surfaces treated with arypon® coatings
- Helps to prevent build-up and extends the time between cleanings
- Resists Stains
- No need for aggressive cleaners

Typical Applications

- Coated Aluminium Facades, etalbond® & ELVAL ENF™
- Coated Aluminium Corrugated Sheets, ELVAL ENF™ Corrugated
- Coated Aluminium Roofing, Orofe®
- Signage and Display, etalbond® light & slim
